Summary

Full-stack software engineer with 4+ years of building production products in TypeScript, React, and Node.js: SDKs, browser extensions, APIs, and smart contracts. Currently at UTU Technologies, shipping features on a trust and reputation platform and leading its LLM integration work. I build with an attacker's view: threat-modelling features, reviewing code for exploitable flaws, and auditing dependencies before they ship, backed by active security vulnerability research (TryHackMe top 1%, a medium-severity smart contract audit finding).

Technical Skills

Languages
TypeScript, JavaScript, Solidity, Rust, Python, Ruby, Bash

Backend & Data
Node.js, Python, Ruby on Rails, REST, GraphQL (Apollo), Neo4j

AI/LLM
LLM service integration (OpenAI, Groq, Ollama), prompt design, response caching, Claude Code

Secure Development
- threat modeling, secure code review, vulnerability research, dependency auditing, OWASP Top 10, and LLM Top 10

Frontend
React, Next.js, React Native, browser extensions (WebExtensions API), HTML/CSS

Blockchain
EVM smart contracts, Foundry, The Graph (subgraphs), Internet Computer (ICP), wallet authentication, npm SDK publishing

Cloud & Tooling
AWS, Linux, Git, GitLab CI, Docker, Netlify, Vercel

Experience

Software Engineer, *UTU*
08/2022 – present
Nairobi, Kenya
(Remote)

- Build and maintain features across UTU's wallet-authenticated trust graph, where ratings, reviews, video attestations, and on-chain endorsements feed personalised trust scores.
- Develop and publish the utu-trust-sdk and web components that partner platforms embed to show trust signals to their users.
- Built the UTU browser extension in React/TypeScript, including per-page and per-URL visibility controls and wallet-based authentication.
- Authored the company's AI integration strategy and technical spec for LLM-powered personalised trust summaries; approved by leadership and broken into implementation tickets in GitLab.
- Implemented a provider-agnostic LLMTrustSummaryService (OpenAI, Groq, Ollama) with caching and documentation for the team.

- Co-developed Rust proxy contracts for ICP–Ethereum integration and deployed smart contracts across multiple EVM networks.
- Led a production incident fix on the utt-subgraph (The Graph), choosing pinned-version redeployment to cut risk, then a planned dependency upgrade.
- Ran security-minded code reviews and helped write incident-response procedures for the browser extension.

Blockchain Developer, *Africa Blockchain Center* 06/2022 – 07/2022
Nairobi, Kenya

- Researched blockchain integration options and built the initial UI/UX, ER diagram, and React Native frontend for a mobile application.

Full-stack Engineer, *Powwater* 12/2021 – 06/2022
Nairobi, Kenya

- Contributed to 3 mobile applications in React Native and Node.js, handling customer accounts and payments.
- Maintained the CI/CD pipeline, Google Analytics, and Sentry error tracking; turned user feedback into actionable issues.

Open-Source Contributhon Intern, *SheCodeAfrica x Jenkins* 04/2021 – 05/2021
Remote

- Participated in the open-source program in partnership with SheCodeAfrica and Jenkins, where I contributed to Jenkins code and got mentorship from Mark Waite, who is a member of the Jenkins governing board and a core maintainer of Jenkins.

Education

Diploma in Cloud Engineering, *ALTSchool Africa* 09/2023 – 08/2024
Kenya

Web3 Development, *Web3Bridge* 01/2022 – 04/2022
Kenya

Fullstack Software Development, *Microverse* 11/2020 – 09/2021

Javascript: Software Development, *Lakehub Academy, Kisumu* 01/2020 – 04/2020

Bachelor of Agribusiness Management, *Egerton University, Njoro* 09/2014 – 09/2018

Cybersecurity Experience

TryHackMe
Paths: Cybersecurity 101, Jr. Penetration Tester, Web Fundamentals, SOC Level 1, and AI Security:

- **Red team:** privilege escalation CTFs (user and root flags) using enumeration, reconnaissance, and OWASP Top 10 exploits such as XSS, CSRF, LFI, and IDOR.
- **Blue team:** Windows Active Directory, malware and log analysis, OSINT, and SIEM/SOAR tooling.
- **AI security:** prompt injection, jailbreaking, RAG vulnerabilities, model supply-chain risks, and threat modelling against the OWASP LLM Top 10 and MITRE ATLAS.

Google Cybersecurity Professional Certificate

Cisco NetAcad Cybersecurity Certificates

- Introduction to Cybersecurity, Cyber Threat Management, Cybersecurity Pathway, Endpoint Security, Network Defense, Network Support Security, and Ethical Hacker

Security Research: VDP & bug bounty
Getting into vulnerability disclosure programs and bug bounty hunting on web and smart contract targets.
